PROFILE

Results-driven Full-Stack Developer specializing in the MERN stack with strong foundations in Data Structures & Algorithms, DBMS, Operating Systems, and Computer Networks. Proven track record of architecting scalable web applications, secure RESTful APIs, and low-latency real-time systems. Adept at translating complex requirements into clean, maintainable code and delivering production-ready features under tight deadlines.

EDUCATION

CQST – UG Program in Software Engineering	2024 – Present
Kurukshetra University – BCA (AI)	2024 – Present
D.A.V Centenary Public School – Class 12 (76%)	2023

SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, C++, C
- **Core CS:** Data Structures & Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks
- **Frontend:** React.js, HTML5, CSS3, ShadCN UI, Tailwind CSS, Zustand
- **Backend:** Node.js, Express.js, REST API Design, JWT Authentication, OAuth 2.0, Middleware Architecture
- **Databases:** MongoDB (Aggregation Pipelines), PostgreSQL (Indexing, Query Optimization)
- **Systems & Concepts:** System Design Fundamentals, Caching (Redis), Event-Driven Architecture, Scalability Patterns
- **DevTools:** Git, GitHub, Docker, Postman, Cloudinary, Linux, VS Code

EXPERIENCE

CodeQuotient – Intern Feb 2026 – Present

- Mastered React.js component architecture by building reusable UI components from scratch, applying prop management, hooks, and performance optimization techniques.
- Strengthened frontend fundamentals by independently designing responsive, cross-device layouts using Tailwind CSS and ShadCN UI across multiple practice projects.
- Practiced state management patterns using Zustand, eliminating unnecessary re-renders and improving data flow clarity in self-built applications.

CodeQuotient – Intern Aug 2025 – Oct 2025

- Built RESTful API endpoints independently using Node.js and Express.js, following MVC architecture and REST design principles throughout.
- Designed and optimized PostgreSQL schemas with indexing and normalization, reducing self-tested query times by ~35% in personal backend projects.
- Developed a layered authentication system covering JWT, role-based authorization, and request validation middleware – applied across personal full-stack projects.

CodeQuotient – Summer Trainee Jul 2025 – Aug 2025

- Completed 5 JavaScript projects independently – including a To-Do App, Stopwatch, and API Compiler – building proficiency in DOM manipulation and async programming.
- Practiced DSA fundamentals daily, solving 2–3 problems per session covering arrays, strings, and recursion to strengthen core problem-solving ability.

PROJECTS

QuickTalk – Real-Time Chat Application [GitHub](#)

- Developed a full-stack real-time messaging platform handling 100+ concurrent connections via Socket.io WebSockets, achieving sub-200ms message delivery latency.
- Designed a unified authentication system supporting OTP-based sign-up, JWT session tokens, and OAuth 2.0, securing all user entry points with zero unprotected routes.
- Integrated Redis caching for session data and active-user lookups, trimming redundant database reads by ~40% and improving response throughput at scale.

Doc-Sign – Digital Document Signing & Management

[GitHub](#)

- Constructed a full-stack document management platform with a **3-tier** Role-Based Access Control (RBAC) system covering Readers, Court Officers, and Admins – eliminating unauthorized document actions.
- Streamlined end-to-end document workflows (upload → review → sign/reject → archive), reducing manual processing steps from **6 to 2** for court officers.
- Delivered an admin dashboard providing full CRUD control over **3** entity types, enabling real-time visibility into document status and user activity.

ShopVerse – E-Commerce Platform

[GitHub](#)

- Launched a full-stack e-commerce platform using the MERN stack with a TypeScript-powered frontend, supporting product listings, cart management, and order processing for a simulated catalog of items.
- Optimized **8** high-traffic API routes through MongoDB aggregation pipelines and selective field projection, cutting average response time by **~30%**.
- Managed global client-side state with Zustand, reducing prop-drilling depth by **4+ levels** and simplifying cart and session logic across **10+ components**.

ERP System – Team Collaboration Project

[GitHub](#)

- Modeled **7** normalized PostgreSQL schemas and backend API endpoints covering students, faculty, courses, fees, and scheduling – ensuring referential integrity and minimal data redundancy.
- Coordinated feature branches, pull requests, and code reviews via Git/GitHub within a **4-person** team, maintaining a clean main branch with zero merge conflicts.

ACHIEVEMENTS

- **Runner-Up – CodeMasters 2025 Hackathon:** Ranked in the top **2** out of all participating teams; solved algorithmic challenges without using built-in library functions under strict time pressure. [\[Certificate\]](#)
- **Industrial Training Program:** Successfully completed a structured software engineering internship program at CodeQuotient Pvt. Ltd., covering full-stack development, backend systems, and professional engineering workflows.
